Olive History in California

The olive industry owes its beginnings to the early Spanish Padres of the California Missions who introduced the Spanish “Mission” olive into California in the 1770’s. The trees provided the olive oil used for cooking and religious purposes. By 1835, the missions were secularized and broken apart. The missions were left unattended and the olive orchards and vineyards suffered greatly. Even with the lack of care, many of the olive trees survived. These established trees provided the cuttings that were planted by the thousands throughout California in the late 1830’s. The first commercial olive oil was pressed in Ventura County in 1871.

In Los Angeles County, William Wolfskill, a former fur trapper from the Midwest, used cuttings from the San Gabriel Mission’s trees and vines to start his orchards and vineyards. He became renown for his expansive crop acreage in Los Angeles and in Davis, California. Alexander Draw who became one of the first Horticultural Inspectors in California oversaw production at the Los Angeles orchard. Mr. Wolfskill’s orchard in Davis was donated to the University of California and is today known as the Wolfskill Experimental Orchard. Andrew McNally, President of the Rand McNally Publishing Company, developed thousands of acres of olive and citrus orchards in La Mirada. It was considered the largest orchard in the country. Olive orchards provided both olive oil and the “California ripe olive” to the growing California population.

There were more than 130 olive oil processing plants in production between 1871 and 1940. Twenty of these operated in Los Angeles County. The American Olive Company began producing olive oil in Los Angeles during the late 1800’s. The olive industry was very volatile; great fortunes were made and lost in a short period of time. The Central Valley emerged as the present day producer of olives. Los Angeles County no longer produces any olive products; however, the remnants of the glorious olive era can be seen throughout residential areas where some of the remaining olive trees still thrive in La Mirada, Los Angeles, and in the San Fernando Valley.

2001 CROP AND LIVESTOCK REPORT

The gross value of agricultural crops and products in Los Angeles County decreased by 3.7% in 2001 to **\$258,260,000**. This is the first year to year decrease since 1999; however, there were still some high points. Field Crops (hay and grain), were up nearly 20% because of stronger prices. The Livestock and Poultry Products were also strong with an increase of more than 60%, due mainly to dairy products. Much of the decrease crop value centered in Vegetable Crops, where prices, acreage, and yields were down from last year. Onions alone were down nearly \$8.4 million.

Ornamental nursery products, where Los Angeles is one of the Statewide leaders, are by far our leading crop. While still saddled with shipping restrictions because of Glassy-Winged Sharpshooters and a Sudden Oak Death quarantine, the sector recovered some of the ground lost last year, with a modest 1% increase to \$171 million.

Even though Los Angeles is one of the largest metropolitan areas in the country, local farmers produce a bounty of different crops within our boundaries, 15 of which are on the Million Dollar list: ornamental trees and shrubs, bedding plants, root vegetables, peaches, dry onions, alfalfa hay, dairy products, flowering indoor plants, herbs, indoor foliage plants, ground covers, strawberries, rangeland, table greens, and vine crops.

Last year was a tough year for many of California's farmers. Continuing increases in inexpensive imported products, pest problems, and ever escalating production costs reduced farm income and makes farming a risky business even in good times.

I want to express my sincere appreciation to all the producers and individuals who provided information for this report; without their support this report would not be possible. Thank you also to the compilers, Richard Sokulsky, Deputy Agricultural Commissioner and Julia Chen, Staff Assistant, for their consistently good work on these reports.

Respectfully submitted,

Cato R. Fiksdal
Agricultural Commissioner/
Director of Weights and Measures

Nursery production in California began commercially with money obtained after the Gold Rush in 1851. The Teague family from San Dimas established the Teague Nursery and the San Dimas Nurseries in 1888. They planted the first citrus orchards in the area and then began selling citrus seed stock. By 1900, their nurseries had more than 700,000 seedling trees and were considered the largest in the world. In 1912, the nurseries shipped 286,000 trees. They balled 3,000 trees per day during the season. The trees were shipped to areas in California as well as to Spain, Italy, and South America.

Magnolia white scale <i>Pseudaulacaspis cockerelli</i>	Cut foliage, Plants	Quar	47
Mealybug <i>Nipaecoccus</i> sp.	Palms	Nurs	4
Mealybug <i>Pseudococcus citriculus</i>	Litchi chinensis	Det	2
Elisa mealybug <i>Pseudococcus elisae</i>	Aglaonema	Quar	1

Pest Exclusion Activities

Pest Intercepted Common Name/ <i>Genus species</i>	Material	Source*	Scope of Program Pest Interceptions
Mealybug (larva) <i>Pseudococcidae</i>	Ti leaves	Quar	2
Melon fruit fly <i>Bactrocera cucurbitae</i>	Papaya	Quar	1
Mexican fruit fly <i>Anastrepha ludens</i>	backyard trees	Det	5
Mexican leafroller <i>Amorbia emigratella</i>	Betel leaf	Quar	3
Microlepidoptera (larva)	Dracaena	Quar	3
Mining scale <i>Howardia biclavis</i>	Ficus benjamina	Quar	5
Mirid bug <i>Miridae</i>	Protea	Quar	1
Mite <i>Oligonychus perseae</i>	Malangai leaves	Quar	1
Moth	Cut flowers	Quar	1
Noctuid moth <i>Noctuidae</i>	Basil	Quar	3
Noctuid moth <i>Spodoptera mauritea</i>	Basil	Quar	1
Pacific mealybug <i>Planococcus minor</i>	Litche chinensis	Det	1
Oleander moth <i>Glyphodes n sp.</i>	Oleander	Nurs	1
Pyriform scale <i>Protopulvinaria pyriiformis</i>	Backyard plants	Nurs, Pub	3
Red imported fire ant <i>Solenopsis wagneri</i>	Turf, Landscape	Det, Pub	193
Red wax scale <i>Ceroplastes rubens</i>	Cut foliage	Quar	5
Rose flea beetle <i>Altica probata</i> or nr	Sticky trap	Nurs	1
Scale <i>Malleolaspis</i> sp.	<i>Chamaedorea</i>	Quar	1

Pest Exclusion Activities

Pest Intercepted Common Name/ <i>Genus species</i>	Material	Source*	Scope of Program Pest Interceptions
Slender soft scale <i>Coccus acutissimus</i>	Dracaena	Quar	1
Slug <i>Veronicella</i> sp.	Cut foliage	Quar	8
Snail <i>Bradybaena similaris</i>	Nursery stock	Quar	26
Soil mealybug <i>Rhizococcus hibisci</i>	Palms	Quar	6
Southern green stink bug <i>Nezara viridula</i>	Cut foliage	Quar	2
Spiraling whitefly <i>Aleurodicus dispersus</i>	Cut foliage	Quar	45
Stellate scale <i>Vinsonia stellifera</i>	Ginger	Quar	2
Stink bug <i>Pentatomidae</i>	Leaves	Quar	1
Termites	Machine tools	Quar	1
Thrips <i>Nesotrips brevicollis</i>	Betel leaf	Quar	1
Torpedo bug <i>Siphanta acuta</i>	Ficus nitida	Nurs, Quar	10
Unilobed scale <i>Pinnaspis uniloba</i>	Alyxia olivaeformis	Quar	4
Tropical palm scale <i>Hemiberlesia palmarum</i>	Palm	Quar	1
Glassy-winged leafhopper (adult) <i>Homalodisca coagulata</i>	Nursery stock	Nurs	24
Two spotted leafhopper <i>Sophonia rufofascia</i>	Nursery stock	Nurs, Quar	46
Wax scale (larva) <i>Ceroplastes</i> sp.	Cut flowers, ginger	Quar	6
Weevil <i>Curculionidae</i>	Ravenea rivularis	Quar	3
White footed ant <i>Technomyrmex albipes</i>	Cut foliage	Quar	75

Pest Exclusion Activities

Pest Intercepted Common Name/ <i>Genus species</i>	Material	Source*	Scope of Program Pest Interceptions

This annual publication presents statistical information on acreage, yield and gross value of agricultural products produced in Los Angeles County. This is in accordance with Sections 2272 and 2279 of the California Food and Agricultural Code. The production values in this report represent gross values and do not reflect the cost of production, net income or loss to producers.
